

SWIMMING POOL, GYMNASIUM TO BE ADDED

Artist's sketch shows future development of the new Torrance Family YMCA at 2900 W. Sepulveda Blvd. The geodesic dome will house a swimming pool and gymnasium and is planned for construction in the next phase of the building program. Completed portion of the

facility is shown at left. Temcor of Torrance will construct the geodesic dome, a five-sided structure which will span a distance of 144 feet and rise to a height of 30 feet, 6 inches.

Ceremonies Set For Dedication

Formal dedication ceremonies for the new Torrance Family YMCA building at 2900 W. Sepulveda Blvd., will begin at 2 p.m. Sunday with the traditional ribbon-cutting ceremony.

Representatives of Kiely Corp., general contractor for the facility, will hand the keys to the building to Dr. Rollin R. Smith, a charter member of the Y Board of Directors. On hand for the ceremonies will be architects Roy Donley and James K. Bell, city officials, representatives of the Chamber of Commerce, and YMCA lay representatives.

The Rev. Edward Goodell, Torrance YMCA chaplain and Good Neighbor of the Year for 1965, will then light the central torch which will burn to remind people to express concern for others each day in the spirit of Christ.

Congratulations

... to a organization that has done so much, for so many, in the past, present and future.

We are happy to see them in their new and deserved home ...

Plan for Future

Dome May Enclose Pool

While the new Torrance Family YMCA building will not be dedicated until Sunday, members of the "Y" building committee already are looking to the future.

A gymnasium and covered swimming pool must be provided at the new Y, 2900 W.

Sepulveda Blvd., if the local facility is to provide a complete program for the Torrance-Lomita area.

Committee members currently are investigating the use of an aluminum geodesic dome to enclose the pool and gymnasium. The dome, ac-

cording to Don Richter, vice president of Temcor of Torrance, is one of the most attractive, efficient, and economical solutions to the pool and gymnasium.

Temcor, with headquarters at 2815 Toledo St., manufacturer of aluminum geodesic domes.
